Toba Magic Fountain

Designed for residential water gardens, the Toba Magic Fountain's Tranquility Fountain can operate in as little as 12 inches of water. It is the ONLY self-contained remote controlled fountain on the market. Place the fountain in the pond and operate the long range RF remote control. No installation is required—simply place it in the water and actuate the fountain and lights at the touch of a button. The Tranquility Fountain can be set to different spray heights and has an adjustable shut off timer. In addition, pond owners benefit by having the opportunity to operate the fountain as an aerator to keep their pond clean and circulating.

Unlike traditional hard-wired fountains, the Toba Magic Fountain® gives pond owners unprecedented control. Both the sound and the shape of each spray pattern changes as you adjust the spray height, giving you over 150 different combinations using the full range of available fountain heads and lens colors. Some pond owners have small water gardens, while others have large aquascapes. Set the spray height to accommodate the size of your pond for the effect you prefer, from a high energy experience to a gentle whisper.

Things to do:

~If you did not fertilize your trees and shrubs earlier this spring, you'll want to add that to your list of things to do this week. After mid-July we will no longer want to apply fertilizer again until the leaves start falling off in October.

~If your lawn is not as dark green as your neighbors, add Fertlome Classic Lawn Food (very high iron) or Greenmaker. Both of these lawn foods work great in the summer months and provide homeowners with a thick, lush, deep green, grass.

~Little pinkish-white flowers blooming in your lawn? This is called Morning Glory (Field Bindweed). This is a very nasty weed and needs to be controlled. For these weeds in your lawn use Fertlome's Weed Free- Zone to kill the weeds and not your grass.

~This sunshine is really causing the string algae to build up in ponds. If you are seeing this long, green "seaweed" building up in the bottom of your pond. You might try Aquascapes S.A.B. (String Algae Buster) which is fortified with AquaClean, dry bacteria, and enzymes. S.A.B. is the product that we have found to work best on this type of algae.

~Make sure you are fertilizing your hanging baskets and other garden pots every other week with a good water soluble fertilizer like Fertlome's Gardening Special.

Drew French gets out of jail, but not for free!

Drew French, assistant nursery manager at the Idaho Falls store, was arrested by local authorities as part of the "Locked Up for Good" event. The Muscular Dystrophy Association sets up a temporary "jail cell" at a public location and the deputies "arrest" local citizens who are then brought to the jail cell. Once there, they are allowed to telephone friends and relatives who pledge money to help with the "jail bird's bail".

Thanks to the generosity of a large number of coworkers, friends, family, and customers...Drew was able to turn \$1,100 over to the Muscular Dystrophy Association on Thursday as bail money to get himself out of jail. (This was enough money to send two suffering children to a week of a special summer camp.)

Thanks Drew!

Enviro Tree

Once in a great while a new product comes along that is truly revolutionary. **EnviroTree™** is just such a product. This new organic based liquid tree food uses only environmentally sound ingredients that trees can easily digest with no harmful bi-products for you or the environment.

EnviroTree™ contains 200 beneficial soil microorganisms, 70 colloidal minerals, Norwegian Sea Kelp, Cytokinins, and Humic, Folic and Amino Acids.

But the truly revolutionary part is how it is applied!

EnviroTree's liquid formulation makes application incredibly easy - no pounding stakes into the ground, making holes in trees, or mixing with water. **EnviroTree™** is sprayed directly on the bark for rapid delivery to all vital parts of the tree. Energy is quickly transferred to the roots where beneficial microbes and bacteria rejuvenate the soil, balance the pH, and improve the health and quality of the soil. Then, nutrients circulate through the branches sparking dramatic growth and stunning color. Leaves get bigger, shinier, and stay on longer, thereby improving photosynthesis. Fruit trees are more bountiful, and fruit is plumper and more juicy.

I first tried a sample of this product in my yard about four years ago and was delighted with the results. Unfortunately it was not commercially available. But now production is in high gear and the product is in stock and ready to go at Town & Country Gardens. We invite you to try it. We guarantee you will be delighted with the results. If not, we will gladly give your money back.

Hollyhocks (*Alcea rosea*)

Growing 4 to 8 feet high, hollyhocks are an old garden standard, particularly useful for background screening or where vertical accent is desired. They grow best in full sun in deep, rich, well drained soils. Some varieties act as reseeding biennials.

See you soon!

The selection of perennials, trees, and shrubs at Town & Country Gardens is awesome! There are so many new or improved varieties of plants that are now available. If you have questions or need some suggestions...please drop by the garden center and let our great staff help you out. We will make sure that your yard is looking its best!

Summer Hours: Open 9-6 Monday-Saturday
